CharaNas Pharmacy Bot — Specialty Notes

Expanded notes with original schematic figures for revision. These are educational drawings inspired by standard undergraduate teaching themes, not copied textbook plates. Always follow your faculty curriculum and latest guidelines.

| Section | Focus                                     |
|---------|-------------------------------------------|
| 1       | Core concepts in Toxicology               |
| 2       | Clinical / practice patterns              |
| 3       | Calculations, quality and decision-making |
| 4       | Errors, ADRs and systems safety           |
| 5       | Checklist and book anchors                |
| 6       | Quick pearls from the bot notes           |
| 7       | Recommended book sources                  |

# 1. Core concepts in Toxicology

High-yield undergraduate themes in toxicology for exams and practice.

Connect mechanism → clinical effect → monitoring → counseling.

Safety, legality, and evidence-based use are central to pharmacy.

Figure: Dose–response idea (schematic)

More dose is not always more effect — watch toxicity and receptors

Schematic figure for learning — verify details in your recommended textbooks.

## Revision prompts

- Explain this section aloud in 60 seconds as if teaching a junior student about toxicology.
- List 3 red flags that would make you escalate care urgently.
- Name 2 investigations and 2 initial management steps you would consider first.

## 2. Clinical / practice patterns

Recognize common presentations and risk situations in toxicology.

Identify high-alert medicines and interaction red flags early.

Document interventions and communicate clearly with the care team.

### Revision prompts

- Explain this section aloud in 60 seconds as if teaching a junior student about toxicology.
- List 3 red flags that would make you escalate care urgently.
- Name 2 investigations and 2 initial management steps you would consider first.

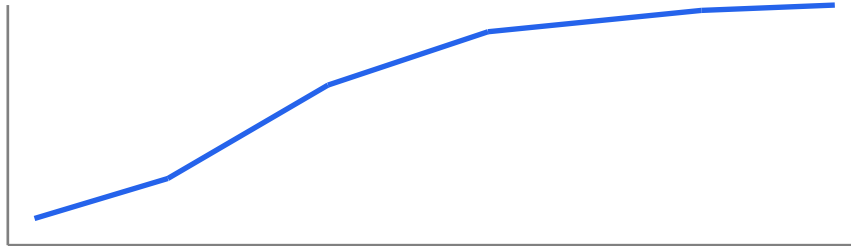

### 3. Calculations, quality and decision-making

Dose calculations, renal/hepatic adjustment, and TDM timing save lives.

Formulation choice (IR vs MR, sterile vs nonsterile) changes outcomes.

Use reliable references; do not rely on memory for critical doses.

Figure: Dose–response idea (schematic)

More dose is not always more effect — watch toxicity and receptors

Schematic figure for learning — verify details in your recommended textbooks.

#### Revision prompts

- Explain this section aloud in 60 seconds as if teaching a junior student about toxicology.
- List 3 red flags that would make you escalate care urgently.
- Name 2 investigations and 2 initial management steps you would consider first.

## **4. Errors, ADRs and systems safety**

Prevent look-alike/sound-alike errors and crush/MR mistakes.

Report ADRs and near misses; improve systems, not only individuals.

Know when to refer urgently (toxicology, sepsis, airway, bleed).

### **Revision prompts**

- Explain this section aloud in 60 seconds as if teaching a junior student about toxicology.
- List 3 red flags that would make you escalate care urgently.
- Name 2 investigations and 2 initial management steps you would consider first.

## 5. Checklist and book anchors

Checklist: indication, dose, interactions, allergies, organ function, counseling, follow-up.

Prevention and stewardship (antimicrobials, opioids) are daily responsibilities.

Primary references: Goldfrank's Toxicologic Emergencies; Casarett & Doull's Toxicology; Local poison center protocols.

### Revision prompts

- Explain this section aloud in 60 seconds as if teaching a junior student about toxicology.
- List 3 red flags that would make you escalate care urgently.
- Name 2 investigations and 2 initial management steps you would consider first.

## 6. Quick pearls

High-yield reminders packaged with this specialty in the CharaNas bot:

1. ABCs before antidotes.
2. Naloxone for opioids; NAC for paracetamol.
3. Charcoal only if appropriate and airway safe.
4. TCA toxicity: wide QRS — bicarbonate themes.
5. Call poison information services early.
  - Link symptoms → anatomy/physiology → investigation → first management step.
  - Write one OSCE-style explanation for a common presentation in this specialty.
  - After reading, do the bot Short MCQ and Case-based Question for active recall.

## 7. Recommended book sources

Standard undergraduate references commonly used internationally. Use the edition your college recommends. Figures in commercial textbooks are copyrighted; use library/licensed access for full plates and photographs.

| # | Reference                           |
|---|-------------------------------------|
| 1 | Goldfrank's Toxicologic Emergencies |
| 2 | Casarett & Doull's Toxicology       |
| 3 | Local poison center protocols       |

How to study with this PDF: read one section → sketch the figure from memory → answer bot MCQs/cases → review mistakes → revisit the matching section.
