

Undergraduate Medicine — Pharmacology Quick Notes

CharaNas — Undergraduate Medicine Department

Study aid only. Confirm with your faculty curriculum and recommended textbooks.

1. Pharmacokinetics: Absorption, Distribution, Metabolism, Excretion (ADME).
2. Zero-order elimination examples: phenytoin, ethanol, high-dose aspirin (capacity-limited).
3. Beta-blockers: ↓ HR/contractility; caution in asthma (nonselective) and decompensated HF.
4. ACE inhibitors: ↓ Ang II → vasodilation + ↓ aldosterone; side effects: cough, hyperkalemia, angioedema.
5. Aminoglycosides: bactericidal, concentration-dependent; toxicity = ototoxicity + nephrotoxicity.
