

Undergraduate Medicine — Endocrinology Notes

CharaNas — Undergraduate Medicine Department

Study aid only. Confirm with your faculty curriculum and recommended textbooks.

1. DKA: hyperglycemia + ketones + acidosis; fluids, insulin, K+.
2. Hashimoto → hypothyroidism; Graves → hyperthyroidism.
3. Metformin first-line for many T2DM patients if eGFR allows.
4. Hypocalcemia: Chvostek/Trousseau; check Mg and PTH.
5. Adrenal crisis: shock + hyponatremia/hyperkalemia — give steroids/fluids urgently.
