

Undergraduate Medicine — Urology Notes

CharaNas — Undergraduate Medicine Department

Study aid only. Confirm with your faculty curriculum and recommended textbooks.

1. Stone types: calcium oxalate most common; struvite with urease organisms; uric acid radiolucent.
2. Loin→groin pain + hematuria = ureteric colic until proven otherwise.
3. Painless hematuria: rule out malignancy (esp. smokers).
4. Pyelonephritis: fever + flank pain + UTI signs → antibiotics ± imaging.
5. BPH: storage/voiding symptoms in older men; assess PSA/exam judiciously.
