

Undergraduate Pharmacy

Pharmacology Study Pack

CharaNas Pharmacy — Specialty Notes

Expanded notes with original schematic figures for revision. These are educational drawings inspired by standard undergraduate teaching themes, not copied textbook plates. Always follow your faculty curriculum and latest guidelines.

Section	Focus
1	Core concepts in Pharmacology
2	Clinical / practice patterns
3	Calculations, quality and decision-making
4	Errors, ADRs and systems safety
5	Checklist and book anchors
6	Quick pearls from these notes
7	Recommended book sources

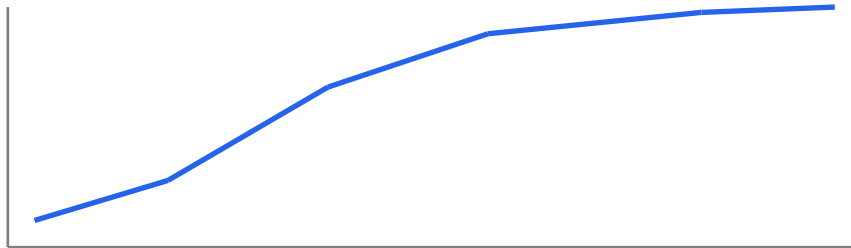

1. Core concepts in Pharmacology

High-yield undergraduate themes in pharmacology for exams and practice.

Connect mechanism → clinical effect → monitoring → counseling.

Safety, legality, and evidence-based use are central to pharmacy.

Figure: Dose–response idea (schematic)

More dose is not always more effect — watch toxicity and receptors

Schematic figure for learning — verify details in your recommended textbooks.

Revision prompts

- Explain this section aloud in 60 seconds as if teaching a junior student about pharmacology.
- List 3 red flags that would make you escalate care urgently.
- Name 2 investigations and 2 initial management steps you would consider first.

2. Clinical / practice patterns

Recognize common presentations and risk situations in pharmacology.

Identify high-alert medicines and interaction red flags early.

Document interventions and communicate clearly with the care team.

Revision prompts

- Explain this section aloud in 60 seconds as if teaching a junior student about pharmacology.
- List 3 red flags that would make you escalate care urgently.
- Name 2 investigations and 2 initial management steps you would consider first.

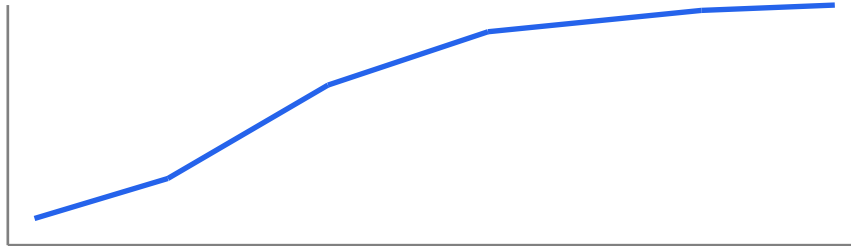

3. Calculations, quality and decision-making

Dose calculations, renal/hepatic adjustment, and TDM timing save lives.

Formulation choice (IR vs MR, sterile vs nonsterile) changes outcomes.

Use reliable references; do not rely on memory for critical doses.

Figure: Dose–response idea (schematic)

More dose is not always more effect — watch toxicity and receptors

Schematic figure for learning — verify details in your recommended textbooks.

Revision prompts

- Explain this section aloud in 60 seconds as if teaching a junior student about pharmacology.
- List 3 red flags that would make you escalate care urgently.
- Name 2 investigations and 2 initial management steps you would consider first.

4. Errors, ADRs and systems safety

Prevent look-alike/sound-alike errors and crush/MR mistakes.

Report ADRs and near misses; improve systems, not only individuals.

Know when to refer urgently (toxicology, sepsis, airway, bleed).

Revision prompts

- Explain this section aloud in 60 seconds as if teaching a junior student about pharmacology.
- List 3 red flags that would make you escalate care urgently.
- Name 2 investigations and 2 initial management steps you would consider first.

5. Checklist and book anchors

Checklist: indication, dose, interactions, allergies, organ function, counseling, follow-up.

Prevention and stewardship (antimicrobials, opioids) are daily responsibilities.

Primary references: Rang and Dale's Pharmacology; Katzung Basic & Clinical Pharmacology; Goodman & Gilman's.

Revision prompts

- Explain this section aloud in 60 seconds as if teaching a junior student about pharmacology.
- List 3 red flags that would make you escalate care urgently.
- Name 2 investigations and 2 initial management steps you would consider first.

6. Quick pearls

High-yield reminders packaged with this specialty in CharaNas:

1. Agonist activates; antagonist blocks receptors.
2. First-pass metabolism can reduce oral bioavailability.
3. Narrow therapeutic index drugs need monitoring.
4. Know major CYP inducers/inhibitors.
5. ACEI cough; beta-blockers caution in asthma.
 - Link symptoms → anatomy/physiology → investigation → first management step.
 - Write one OSCE-style explanation for a common presentation in this specialty.
 - After reading, do the Short MCQ and Case-based Question for active recall.

7. Recommended book sources

Standard undergraduate references commonly used internationally. Use the edition your college recommends. Figures in commercial textbooks are copyrighted; use library/licensed access for full plates and photographs.

#	Reference
1	Rang and Dale's Pharmacology
2	Katzung Basic & Clinical Pharmacology
3	Goodman & Gilman's

How to study with this PDF: read one section → sketch the figure from memory → answer the MCQs/cases → review mistakes → revisit the matching section.
